Credit Based Grading System

Electrical Engineering, IV-Semester

EE-4003 Digital Electronics Logic Design

COURSE OBJECTIVE

This course covers the basics of digital logic circuits and design. It provides Boolean algebra concepts and their application in digital circuitry and elaborates on both combinational and sequential circuits. Memory circuits are also covered.

COURSE CONTENT

Number Systems and Codes: Digital number systems, base conversion, Binary, Decimal, octal, Hexadecimal, number system with radix r , Gray codes. Alphanumeric codes – ASCII code and BCD codes, concept of parity, complement's & $(r-1)$'s, subtraction with complements, signed Binary numbers, Error Detecting & Correcting codes. Basic Theorems & Properties of Boolean algebra: AND, OR, NOT operators, laws of Boolean algebra, Demorgan's theorem, Boolean expression & logic diagram. Negative logic, Alternate logic gate representation (concept of bubbled gates) canonical and standard Forms (Minterms & Maxterms), sum of minterms & product of maxterms, conversion between canonical forms. Truth table & maps, 2,3,4,5 and 6 variable maps, solving digital problems using Maps, Don't care conditions, Tabular minimization. Sum of product & product of sum reduction, Exclusive OR & Exclusive NOR circuits, Parity generator & checkers.

Combinational Circuits: Design procedure, Adders (half and Full), subtractor (half and full) code convertors, Analysis of design, Universal building blocks, Implementation of any logic circuit with only NAND gates or with only NOR gates, Binary serial adder, parallel adder, serial/parallel adder, look ahead carry generator, BCD adder, Binary multiplier, Magnitude comparator, Decoder, Demultiplexer, Encoders, priority encoder, Multiplexers & implementation of combinational logic diagram.

Sequential Logic Circuit : Latches, SR latch with NAND & NOR gates, D latch, edge triggered flip flop, J-K flip flop, T flip flop, Master slave flip flop, Analysis of clocked sequential circuit, state table, state diagram, state reduction state equations, state assignments, flip flop excitation table & characteristic equations, Design procedure for sequential circuits, Design with state reduction, Applications of flipflop.

Registers and Counters : Asynchronous and Synchronous counter, counters with MOD numbers, Down counter, UP/DOWN counter, propagation delay in ripple counter, programmable counter, Pre-settable counter, BCD counter, cascading, counter applications, Decoding in counter, Decoding glitches, Ring Counter, Johnson counter, Rotate left & Rotate right counter, Registers – Buffer, Shift left, shift right, shift left/Right registers, parallel in parallel out, serial in serial out, parallel in serial out, serial in parallel out registers. Random Access Memory, Timing waveform, Memory Decoding, Internal Construction, Coincident decoding, Address multiplexing, Read only memory – Combinational circuit implementation, Type of ROMs, combinational PLDs, Programmable Logic Array (PLA), Programmable Array Logic (PAL), sequential programmable device. Analog to digital conversion – Ramp type, dual slope, integration, successive approximation, parallel conversion, parallel/ serial conversion, convertor specifications, Digital to Analog convertors – Binary weighted & R/2R D to A convertors.

COURSE OUTCOME:

Student after successful completion of course must possess an understanding of numerical values in various number systems and perform number conversions between different number systems and Understand the importance and need for verification, testing of digital logic and design for testability. The student will be able to design, simulate, built and debug complex combinational and sequential circuits based on an abstract functional specification.

EVALUATION

Evaluation will be continuous an integral part of the class as well through external assessment. Laboratory assessment will be based on external assessment, assignments, presentations, and interview of each candidate.

List of Experiments (Expandable):

1. Verification of all the logicgates.
2. Design of BCD to Excess-3 codeconverter.
3. Implementation of NAND & NOR as Universalgate.
4. Design of RS, JK, T& D Flipflop.
5. Multiplexer /Demultiplexer based boolean function
6. Design of combinational circuit forthe
 - (i) Halfadder
 - (ii) Fulladder
 - (iii) Half subtractor
 - (iv) Fullsubtractor
7. Design various A-D & D-Aconvertors.
8. Verify the truth table of SR flip flop
9. Verify BCD to seven segment decoder.
