## **CE-226**

## **B.E. IV Semester**

Examination, June 2017

## Choice Based Credit System (CBCS) Water Supply and Waste Water Engineering - I

Time: Three Hours

Maximum Marks: 60

www.rgpvonline.com www.rgpvonline.com

www.rgpvonline.com

Note: i) Attempt any five questions.

- ii) All questions carry equal marks.
- iii) Assume data suitably, if any missing.
- a) Enumerate the different surface and sub surface sources of water and compare the quality and quantity and suitability of various sources.
  - Explain the need and importance for planned water supply scheme to town.
     www.rgpvonline.com
- 2. a) What is an intake structure? What are the factors governing the selection of site for locating an intake?
  - b) Explain with a neat sketch of a reservoir intake.
- 3. a) Explain various waterborne diseases and their control.
  - Explain the different physical, chemical and bacteriological tests conducted on water.
- 4. a) Compare conservancy and water carriage system of sanitation.
  - b) Compare separate and combine sewerage system.

[2]

Design the section of a combined circular sewer from the following data:

Area to be served: 200 hectare

Population: 45,000

www.rgpvonline.com

Time of entry : 10 min

Time of flow : 20 min

6. a) What do you understand by self-purification property of a stream?

b) What do you understand by oxygen sag curve?

7. A town discharge 80 cumecs of sewage into a stream having a rate of flow of 1200 cumecs during lean days, at a 5-day BOD of sewage at the given temperature is 250mg/l. Find the amount of critical DO deficit and its location in the downstream portion of the stream portion of the stream. Assume deoxygenation coefficient K as 0.1 and coefficient of self-purification (fs) as 3.5. Assume saturation DO at given temperature as 9.2mg/l.

8. Explain following:

a) BOD

www.rgpvonline.com

b) COD

c) Dissolve oxygen

d) Relative stability
