Total No. of Questions: 8]

[Total No. of Printed Pages: 4

Roll No .....

## **EC-222 (CBCS)**

## **B.E. III Semester**

Examination, December 2017

## Choice Based Credit System (CBCS)

**Network Analysis** 

Time: Three Hours

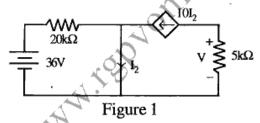

Maximum Marks: 60

Attempt any five questions. Note: i)

www.rgpvonline.com

www.rgpvonline.com

- All questions carry equal marks.
- Calculate the voltage (V) in the circuit of Figure 1.

Determine I in the circuit shown in Figure 2.

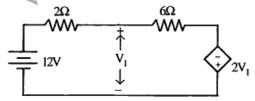

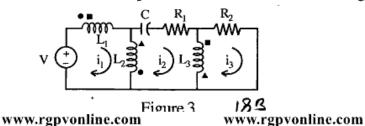

Figure 2

Write the KCL equations for the circuit shown in Figure 3.

www.rgpvonline.com

www.rgpvonline.com

For the network shown in Figure 4, draw network graph. Obtain the basic cutsets and write basic cutset matrix.

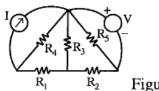

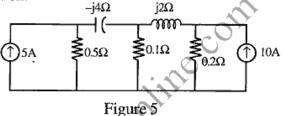

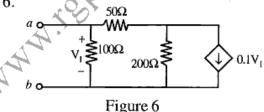

Figure 4

For the network shown in Figure 5. Obtain the incidence matrix, the node admittance matrix and the matrix node equation.

Find the Norton equivalent of the network shown in Figure 6.

Determine the value of  $\boldsymbol{R}_{L}$  to be connected across AB in Figure 7, for maximum power transfer. Also calculate the maximum power absorbed by R, .

- b)
- State and prove reciprocity, and compensation theorems. State and prove Tellegen's theorem.
- Find the current i(t) for the network shown in Figure 8 if the voltage source  $v(t) = 2e^{-0.5t} u(t)$  and  $v_c(0^+) = 0$

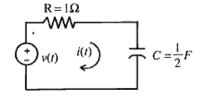

Figure 8

At t = 0, s is closed in the circuit of figure 9, find  $v_c(t)$ and  $i_c(t)$ . All initial conditions are zero

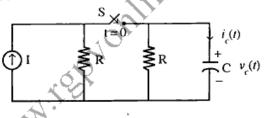

Figure 9

- Calculate the current in  $6\Omega$  resistor of the circuit of Figure 10 by
  - Thevenin's theorem
  - Superposition theorem

Use Laplace transform method:

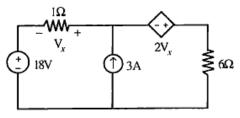

Figure 10

pTO

7. a) Determine the Z-parameters for the network shown in figure 11.

[4]

Obtain the Z-parameters of the network shown in figure 12.

- Write short notes on any two of the following:
  - Parallel resonance
  - Maximum power transfer theorem
  - Hybrid parameters
