EE/EX-3002 (CBGS) **B.E. III Semester**

Examination, December 2017

Choice Based Grading System (CBGS) Electrical Measurements and Instrumentation

Time: Three Hours

Maximum Marks: 70

Total number of questions eight. Note: i)

- ii) Attempt any five questions.
- iii) All questions carry equal marks.
- Discuss various types of errors in measuring electrical quantities. How these errors can be minimized?
 - Discuss static and dynamic characteristics of measurement systems.
- Explain principle of operation and construction of ballistic galvanometer.
 - What do you understand by digital instruments? Explain with the help of block diagram.
- Derive the expression for torque in an electrodynamometer type instruments.

182

Describe the general requirements for a material to be used for shunts for ammeter and multipliers for voltmeters.

[2]

Write down the characteristics of potential transformer in details.

- b) Explain the shape of scale and errors in electrodynamometer Wattmeters.
- Explain in detail the working principle of Tri-vector meter.
 - What is Phantom Loading? Explain with an example how it is more advantageous then testing with direct loading?
- Explain the working of single phase moving iron type power factor meter.
 - b) Explain the theory and operation of Resonance type frequency meter.
- Explain the loss of charge method for measurement of insulation resistance of cables.
 - How the resistance are classified? Explain the method to measure a low resistance.
- Explain with circuit diagram the Lloyd-Fisher square for measurement of Iron loss in a Iron Specimen.
 - Explain the advantage of digital instruments over analog instruments.
