**AU/ME-228** 

**B.E. IV Semester** 

Examination, June 2017

## Choice Based Credit System (CBCS) Machine Design - I

Time: Three Hours

Maximum Marks: 60

Note: i) Attempt any five questions.

All questions carry equal marks.

www.rgpvonline.com

- a) Write and explain the general consideration in machine design.
  - b) What do you understand by stress concentration? Why stress concentration factor is ignored for ductile material under static loading?
- a) What do you mean by fatigue loading? Discuss various types of fatigue stresses generally found in designing.
  - b) Discuss the mechanism of fatigue failure.

[2]

4. A circular bar of 500mm length is supported freely at its two ends. It is acted upon by a central concentrated cyclic load having a minimum value of 20kN and a maximum value of 50kN. Determine the diameter of bar by taking factor of safety as 2.0. The material properties of bar are given as

 $\sigma_u = 650 \text{MPa}, \sigma_y = 500 \text{MPa} \text{ and } \sigma_e = 350 \text{MPa}.$ www.rgpvonline.com

- a) What are the various permanent and detachable fastenings?
   Give a complete list with the different types of each category.
  - b) Sketch and discuss the various types of welded joints used in pressure vessels. What are the considerations involved?
- 6. a) Discuss the design procedure of socket cotter joint.
  - Discuss hydrodynamic theory of lubrication and derive Reynold's equation of bearing design.

www.rgpvonline.com

- 7. a) Explain the stability chart of the Journal bearing.
  - b) Find the rating life of the 50mm bore, light series, ball journal bearing under a 6800N radial load at 600rpm. The load is out of balance and therefore rotates with the inner ring. There is no shock loading.
- 8. a) What do you mean by a leaf spring? Give the expression for stress and deflection in a leaf spring.
  - b) Write down the design procedure of a helical spring.
